

Fantasy Life Setup Tutorial (SQL Way)

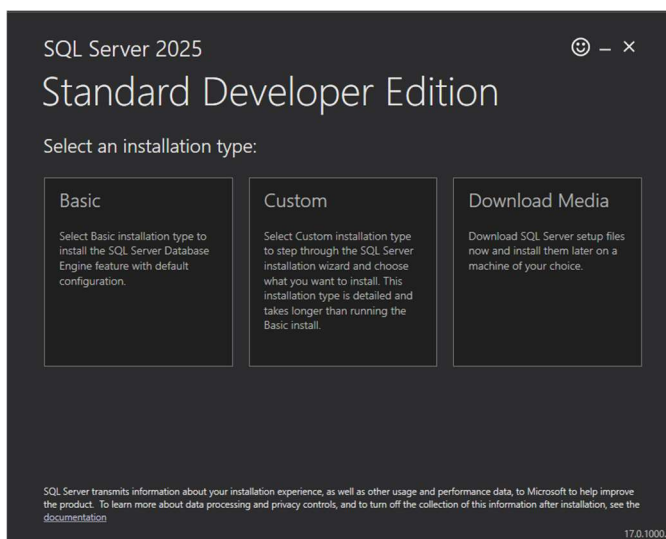

What is needed?

- ❖ Microsoft SQL Server (any version's developer Edition)
- ❖ server新商城.zip
- ❖ SQL Server Management Studio (SSMS)

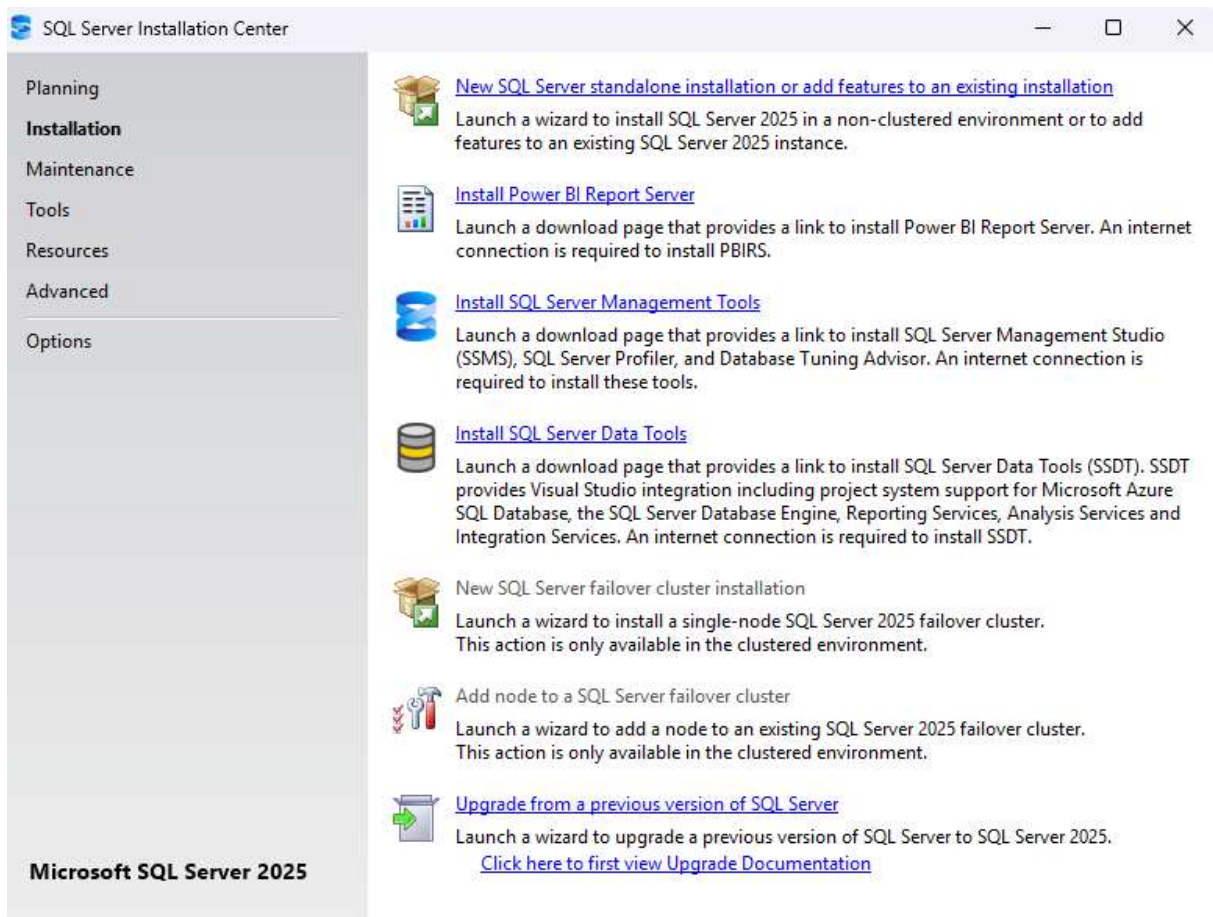

Download SQL Server from <https://www.microsoft.com/en-us/sql-server/sql-server-downloads> You'll want to download the Developer Edition so you don't hit any limits on Size for the DB.

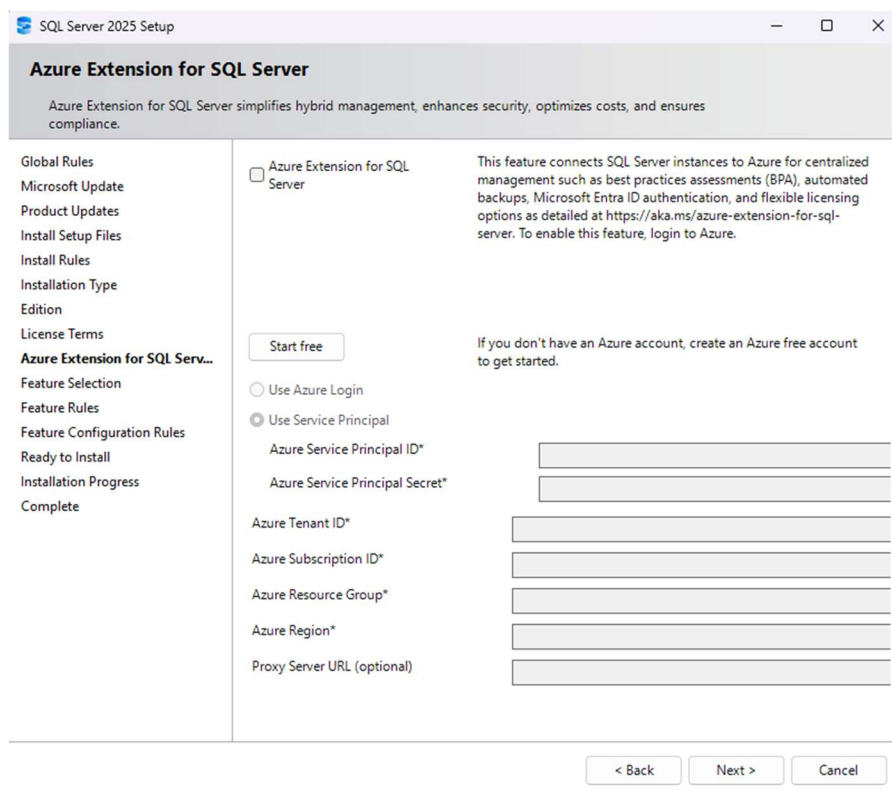

Once you start the Program choose Custom so you can Setup stuff like Server-name etc. You can change the Download Path if you want but you can just hit install on the next screen.

Once you arrived on the Installation Center you can just click on Installation and click New SQL Server standalone installation or add features to an existing installation.

In the Installation you can press next until you arrive on this Step. Please uncheck “Azure Extension for SQL Server” since it isn’t needed and move on.

On the next screen you only need to check Database Engine Services and proceed.

The screenshot shows the 'Feature Selection' window of the SQL Server 2025 Setup. The left sidebar lists various installation options, with 'Feature Selection' currently selected. The main area is titled 'Feature Selection' and includes a sub-header 'Select the Standard Developer features to install.' Below this, there's a section for 'Looking for Power BI Report Server?' with a link to 'Download it from the web'. The 'Features' section is divided into three categories: 'Instance Features', 'Shared Features', and 'Redistributable Features'. Under 'Instance Features', 'Database Engine Services' is checked, while others are unchecked. To the right, a 'Feature description' box explains that each instance feature is isolated. Below that, 'Prerequisites for selected features' lists 'Windows PowerShell 3.0 or higher' and 'Microsoft Visual C++ 2017 Redistributable'. A 'Disk Space Requirements' section shows 'Drive C: 1008 MB required, 440362 MB available'. At the bottom, there are buttons for 'Select All', 'Unselect All', and navigation buttons '< Back', 'Next >', and 'Cancel'.

Looking for Power BI Report Server? [Download it from the web](#)

Features:

Instance Features

- ☒ Database Engine Services
- ☐ SQL Server Replication
- ☐ AI Services and Language Extensions
- ☐ Full-Text and Semantic Extractions for Search
- ☐ PolyBase Query Service for External Data
- ☐ Analysis Services

Shared Features

- ☐ Integration Services
- ☐ Scale Out Worker

Redistributable Features

Feature description:

The configuration and operation of each instance feature of a SQL Server instance is isolated from other SQL Server instances. SQL Server instances can operate side-by-side on the same computer.

Prerequisites for selected features:

Already installed:

- Windows PowerShell 3.0 or higher
- Microsoft Visual C++ 2017 Redistributable

Disk Space Requirements

Drive C: 1008 MB required, 440362 MB available

Select All Unselect All

Instance root directory: C:\Program Files\Microsoft SQL Server\

Shared feature directory: C:\Program Files\Microsoft SQL Server\

Shared feature directory (x86): C:\Program Files (x86)\Microsoft SQL Server\

< Back Next > Cancel

On this screen press on Named instance and type in your desired SQL Servername.

The screenshot shows the 'Instance Configuration' window of the SQL Server 2025 Setup. The left sidebar lists various installation options, with 'Instance Configuration' currently selected. The main area is titled 'Instance Configuration' and includes a sub-header 'Specify the name and instance ID for the instance of SQL Server. Instance ID becomes part of the installation path.' Below this, there are two radio buttons: 'Default instance' and 'Named instance: *'. The 'Named instance: *' option is selected, and the text 'SERVERNAMEHERE' is entered in the adjacent text box. Below this, the 'Instance ID' field also contains 'SERVERNAMEHERE'. The 'SQL Server directory' field shows 'C:\Program Files\Microsoft SQL Server\MSSQL17.SERVERNAMEHERE'. At the bottom, there's a table titled 'Installed instances:' with columns for 'Instance Name', 'Instance ID', 'Features', 'Edition', and 'Version'. The table is currently empty. At the bottom right, there are navigation buttons '< Back', 'Next >', and 'Cancel'.

☐ Default instance

☒ Named instance: * SERVERNAMEHERE

Instance ID: SERVERNAMEHERE

SQL Server directory: C:\Program Files\Microsoft SQL Server\MSSQL17.SERVERNAMEHERE

Installed instances:

Instance Name	Instance ID	Features	Edition	Version
---------------	-------------	----------	---------	---------

< Back Next > Cancel

You can keep on pressing next until you arrive on this screen. For the Authentication Mode use Mixed Mode and enter your desired password for the “sa” Account (System Admin) Also press on Add Current User. This will give your Windows Account Admin Status. Just go on until it starts installing. Take a Cup of Coffee because it may take a while.

The screenshot shows the 'SQL Server 2025 Setup' window, specifically the 'Database Engine Configuration' step. The window has a title bar with the Microsoft logo and the text 'SQL Server 2025 Setup'. Below the title bar is a header section with the title 'Database Engine Configuration' and a subtitle 'Specify Database Engine authentication security mode, administrators, data directories, TempDB, Max degree of parallelism, Memory limits, and Filestream settings.'.

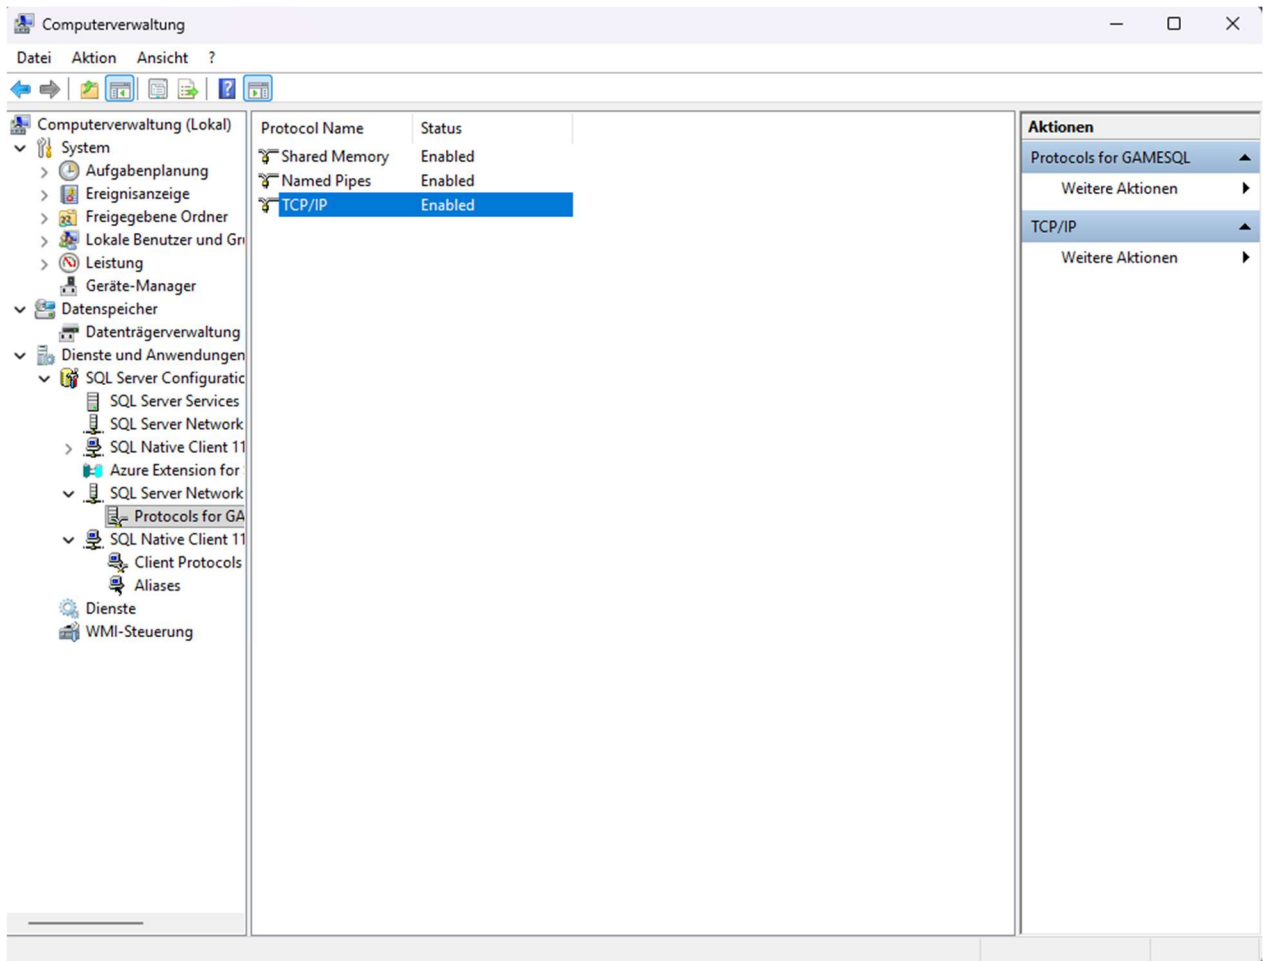

On the left side, there is a navigation pane with the following items: Global Rules, Microsoft Update, Product Updates, Install Setup Files, Install Rules, Installation Type, Edition, License Terms, Azure Extension for SQL Server, Feature Selection, Feature Rules, Instance Configuration, Server Configuration, **Database Engine Configuration** (highlighted), Feature Configuration Rules, Ready to Install, Installation Progress, and Complete.

The main area of the window is divided into two tabs: 'Server Configuration' (selected) and 'Data Directories'. The 'Server Configuration' tab contains the following sections:

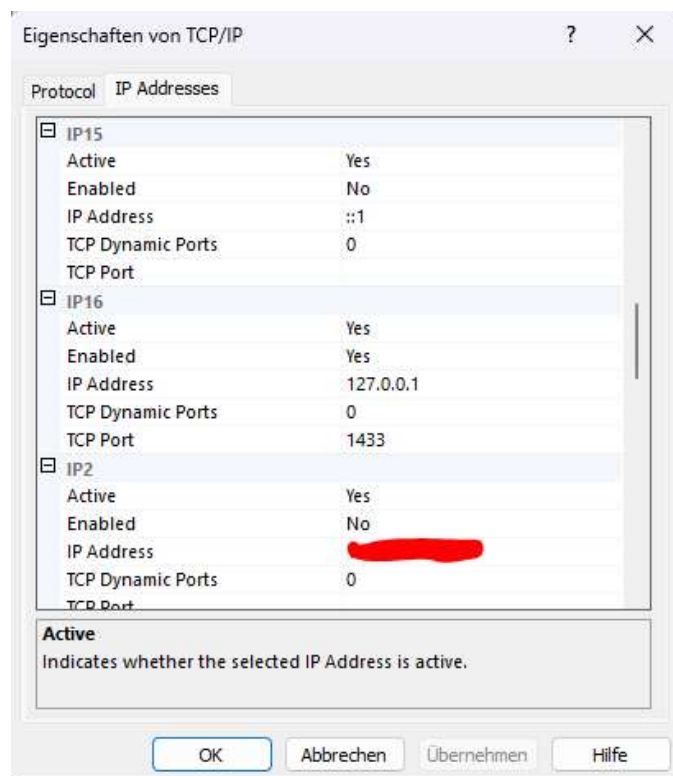

- Authentication Mode**: A section with two radio buttons. The first is 'Windows authentication mode' (unselected). The second is 'Mixed Mode (SQL Server authentication and Windows authentication)' (selected).
- Specify the password for the SQL Server system administrator (sa) account.**: A section with two text input fields. The first is labeled 'Enter password:' and the second is labeled 'Confirm password:'.
- Specify SQL Server administrators**: A section with a large empty rectangular box on the left and a text box on the right that says 'SQL Server administrators have unrestricted access to the Database Engine.' Below the empty box are three buttons: 'Add Current User', 'Add...', and 'Remove'.

At the bottom of the window, there are three buttons: '< Back', 'Next >', and 'Cancel'.

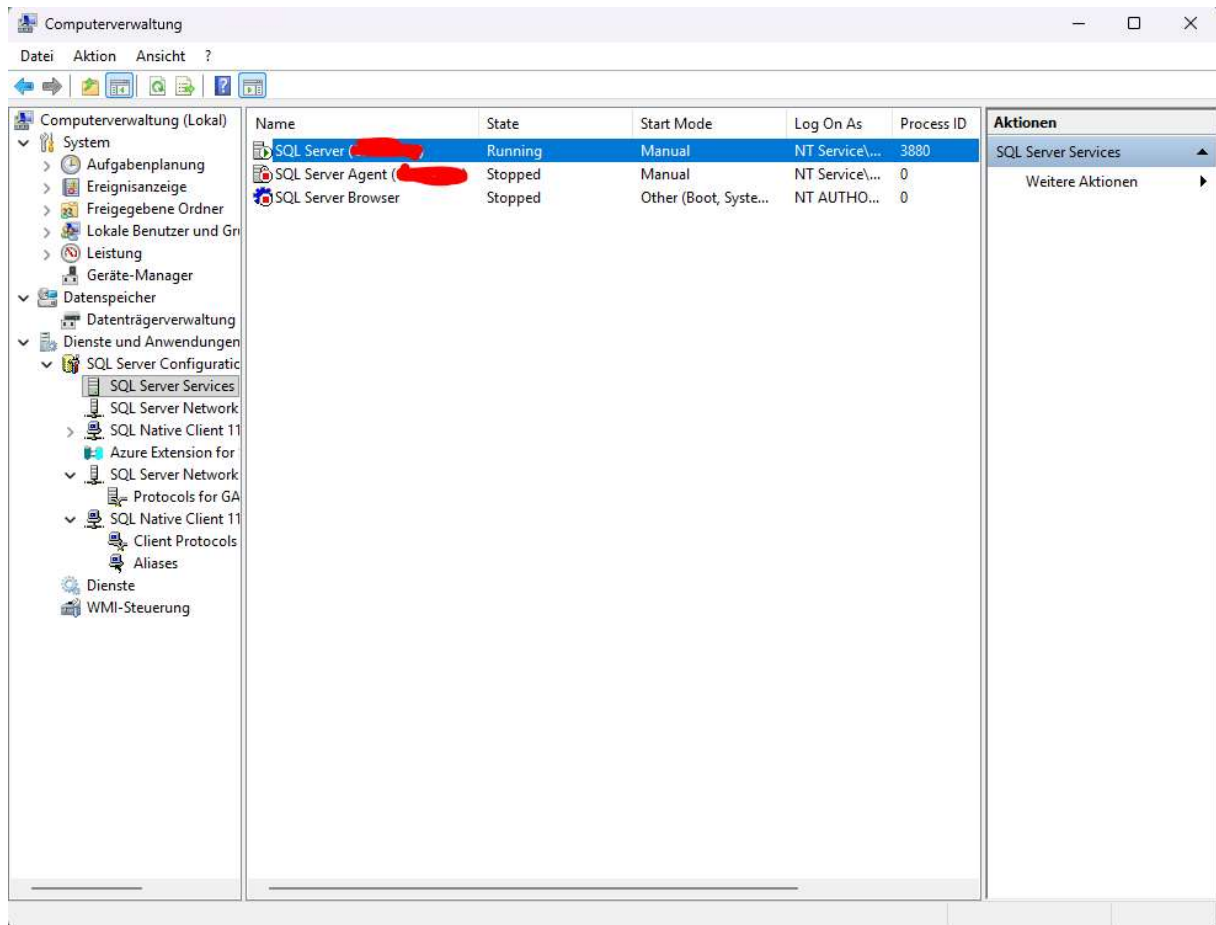

Now press Win + R and type in compmgmt.msc and navigate to the point as shown (sorry my Pc's on German.)

On the following Window press on IP Address and search for “127.0.0.1” set Enabled on yes and give it the TCP port 1433. Scroll down to IPAll and give it the same TCP Port and apply the changes and hit okay.

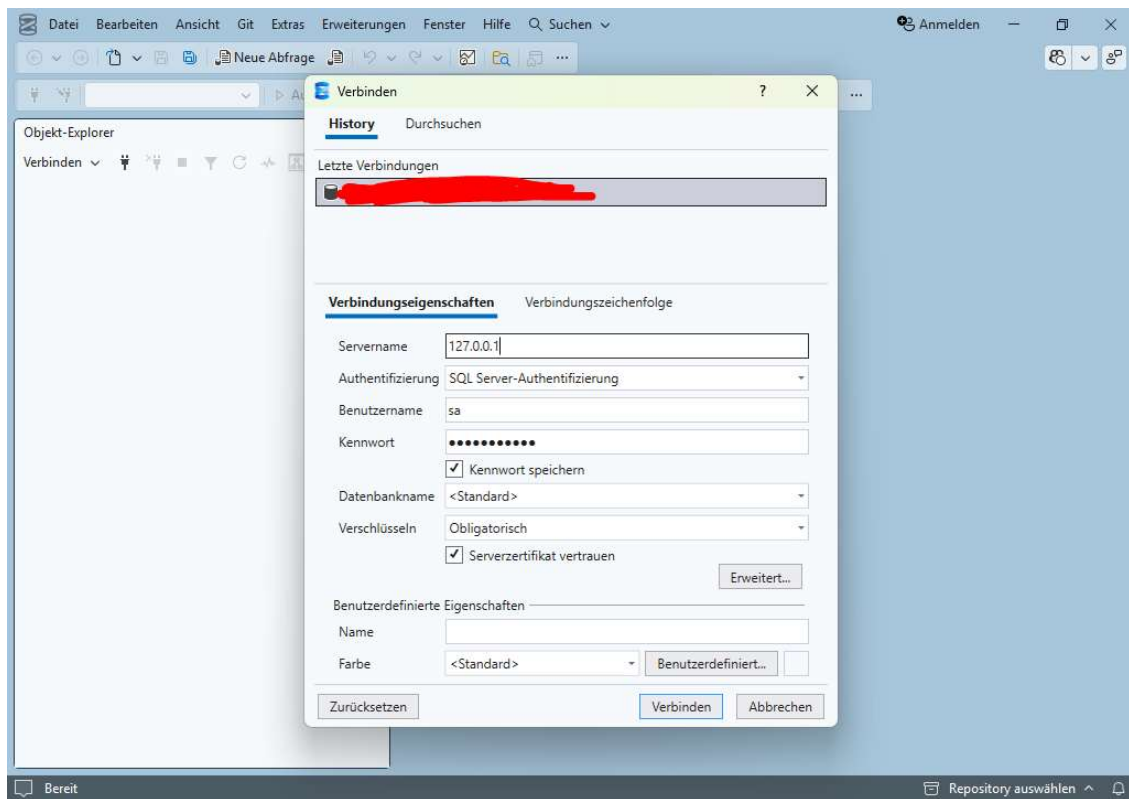

Once you're done with that you can restart your SQL Server by right click SQL Server (SERVERNAME) and restart.

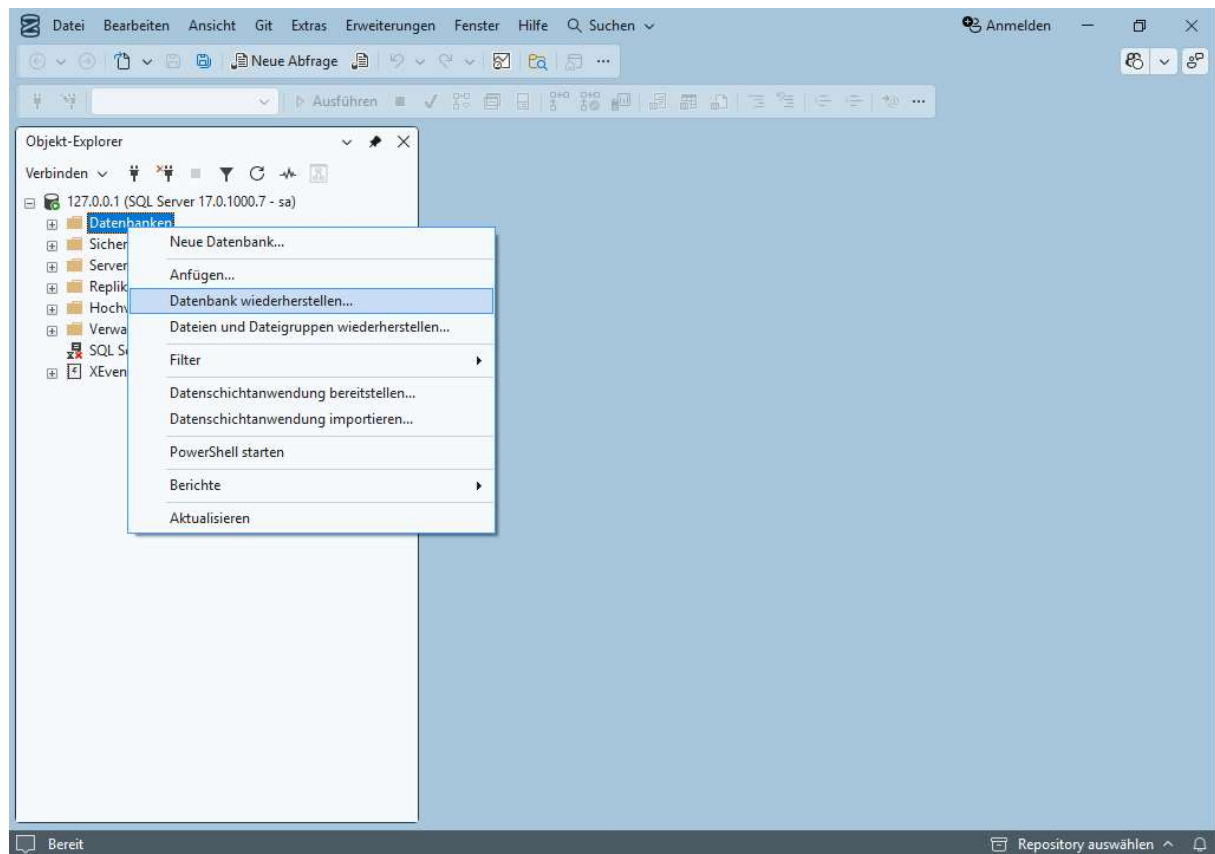

That concludes the SQL base Setup! For the Database side we need SSMS. You can download it at <https://learn.microsoft.com/en-us/ssms/install/install> and pressing on SQL Server Management Studio 22 Installer.

Just run the Installer and hit on Install once you're past the "Before we start" Window.

Once you're done Installing run SSMS you're met with this screen then.

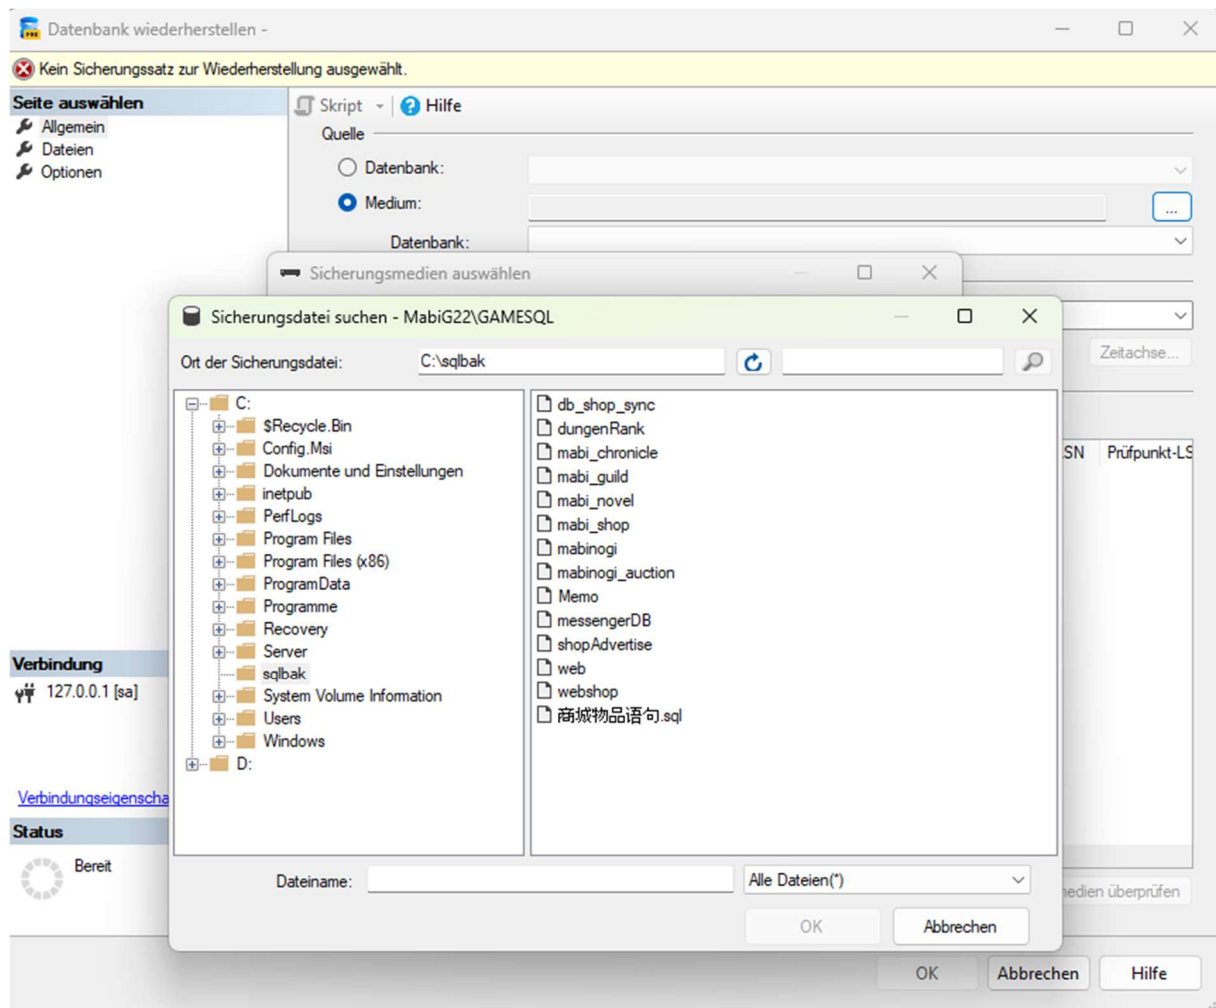

Choose SQL Server-Authentication and type 127.0.0.1 into Servername. Username is going to be “sa” and the Password is going to be the Password you’ve setup previously on the SQL Setup. Make sure to to enable “Trust Server Certificate” and hit Connect.

Make sure to unpack sqlbak空数据库 in the Root of your Hard Drive before you right click on Database and selecting "Restore Database" .

Now choose Medium as Source and select the three dots on the right side. Now Navigate to the sqlbak folder and make sure to switch to All Files on the right side of Filename. Only select one Backup at a Time. Once selected you should return to the previous window and choose ok to restore the Database. Repeat that step for every Database except the Chinese SQL file.

Now you should create your Account to Login to the Game. Navigate to mabinogi and right click dbo.account and select Edit Top 200 Rows. There should be 2 NPC Accounts one for Channel 1 and the Second for Housing. You can take these as a reference to setup your Account

For the Password you need to Create an Uppercase MD5 Hash. You can create one on <https://www.miraclesalad.com/webtools/md5.php>. Make sure to enable Uppercase hash(es)! Just copy the MD5 Hash and insert it into password for your Account. For Authority... 6 is NPC 9 is Boss and 0 is normal Player. You also might want to change the passwords for the NpcAccounts.

md5 Hash Generator

This simple tool computes the MD5 hash of a string. Also available: [SHA-1 hash generator](#) and [SHA-256 hash generator](#).

String(s):

password

md5

☐ Treat multiple lines as separate strings (blank lines are ignored)
☒ Uppercase hash(es)
☐ Blur string(s)

MD5 Hash(es):

Privacy notice: All content generated by this tool is done on your computer via client-side JavaScript whenever possible, or on the Miracle Salad server as a fallback if not. No submitted or generated data is recorded or stored by Miracle Salad. See the [website privacy statement](#) regarding general use of this website.

Special note about line endings: Mac/Unix and Windows use different codes to separate lines. The tool on this page normalizes all line endings to a Line Feed (\n). Other tools are available online if you need hashes specifically with Windows line endings (Carriage Return + Line Feed: \r\n).

Reminder: [MD5 is not a cryptographically secure hashing algorithm](#).

Once you're done with that. You Only need to Setup the DB_XML Properly. To do that just edit the Config.xml and change the Server to 127.0.0.1 and insert your Password for the User sa.

```
<account server="127.0.0.1" database="mabinogi" user="sa" password="" />
<accountref server="127.0.0.1" database="mabinogi" user="sa" password="" />
<character server="127.0.0.1" database="mabinogi" user="sa" password="" />
<prop server="127.0.0.1" database="mabinogi" user="sa" password="" />
<bank server="127.0.0.1" database="mabinogi" user="sa" password="" />
<itemidpool server="127.0.0.1" database="mabinogi" user="sa" password="" />
<charidpool server="127.0.0.1" database="mabinogi" user="sa" password="" />
<propidpool server="127.0.0.1" database="mabinogi" user="sa" password="" />
<guild server="127.0.0.1" database="mabi_guild" user="sa" password="" />
<guildidpool server="127.0.0.1" database="mabi_guild" user="sa" password="" />
<loginidpool server="127.0.0.1" database="mabinogi" user="sa" password="" />
<websynch server="127.0.0.1" database="mabinogi" user="sa" password="" />
<castle server="127.0.0.1" database="mabinogi" user="sa" password="" />
<house server="127.0.0.1" database="mabinogi" user="sa" password="" />
<memo server="127.0.0.1" database="Memo" user="sa" password="" />
<chronicle server="127.0.0.1" database="mabi_chronicle" user="sa" password="" />
<ruin server="127.0.0.1" database="mabinogi" user="sa" password="" />

<houseguestbook server="127.0.0.1" database="mabinogi" user="sa" password="" />
<dungeonrank server="127.0.0.1" database="dungenRank" user="sa" password="" />
<channelingkeypool server="127.0.0.1" database="mabinogi" user="sa" password="" />
<promotionrank server="127.0.0.1" database="mabinogi" user="sa" password="" />
<mailbox server="127.0.0.1" database="mabinogi" user="sa" password="" />
<farm server="127.0.0.1" database="mabinogi" user="sa" password="" />
<bididpool server="127.0.0.1" database="mabinogi" user="sa" password="" />
<bid server="127.0.0.1" database="mabinogi" user="sa" password="" />
<event server="127.0.0.1" database="mabinogi" user="sa" password="" />
<worldmeta server="127.0.0.1" database="mabinogi" user="sa" password="" />
<wine server="127.0.0.1" database="mabinogi" user="sa" password="" />
```

Once you're done with that you can Proceed with the normal Setup Guide from Flipend0 from G13S1 Mabinogi Files on Ragezone at Post #11 Account Creation with the Tool in Authenticator isn't needed since we're using SQL Mode. Make sure to setup everything with the corresponding NPCs in the Database and use Regular, China instead of Regular, Japan.

<https://forum.ragezone.com/f857/mabinogi-mabinogi-g13s1-test02-server-1122892/>

Don't forget to check on Auction Server and Messenger Server!

Once you're through that your Server should be up and running!
